SAMPLE JAR WITH SPRING HANDLE “NEW”

Product codes:

Reference: SE201-00075
EAN13: -
UPC: -

Product attributes:

Product description:

New sample jar that meets the requirements of the new JIG aviation standards.

- **Container**: Capacity 1 USG = 3.78 liters
- **Filling and emptying our sampler**: Larger DN25 ball valve solution for improved emptying flow + new cross-shaped ball valve design for easier cleaning of the ball and prevention of contaminants.
- **VORTEX improvement**: Enlargement of the fuel inlet hole in the base of the jar to Ø6 = better vortex. See video from the first beta test.
- **Lid vent solution**: Redesign of the lid to include a vent with a downward outlet to prevent splashing on the operator and water from entering the jar.
- **Actuation and ergonomics of the current handle for users**: Integration of a spring-return

handle, which is more ergonomic and is now required by the JIG for each truck drain point in a spring-return version (dead man's switch).

- **Closure**: A less powerful magnetic opening solution has been retained on the lid, plus a new hinge cut from solid material for vibration-free and gap-free closure.

- **Retrofit on other sampler jars**: Adaptor plates for other brands can be sold as a kit with the jar.
