Product description:

Hydraulic distributor for refueller platform cylinder. These 2/2, model NBVP 16 valves with electric, hydraulic, pneumatic or manual control are conical flap valves. Due to the internal pressure balance, the permissible pressure is the same for all 2/2 and 3/2 valve ports. A return spring returns the valves to the home position when the electromagnet is not energized. When actuated electrically, the notched control version switches to the basic or switching position as a result of a brief impulse controlling the corresponding opposite electromagnet coil. 2/2-way valves can be equipped with an additional pressure switch.
