Jet level sensor prob Meggitt F613CD

Product codes:

Reference:
PC173-00001
EAN13: -
UPC: -

Product attributes:

Product description:

The Meggitt Jet Level Sensor provides high level control for bottom loading systems without the use of moving parts. There are no parts to wear out, hence it lasts indefinitely. It can be used as a two-stage control to provide extremely accurate level control. Unlike its predecessor (F608), the (F613) does not need an auxiliary pressure regulator. Proper function is possible with inlet pressures to 200 psi. The Jet Level Sensor is designed to provide a “Fail Safe” system – line breakage, etc… prevents transmission of pressure signal to main shutoff valve causing flow to stop. It can be used with several Meggitt Internal Valves or line mounted control valves to provide the system required.
