Product description:

This mobile ladder is suitable for working on the dome of tanks or cisterns and containers.

It allows access and interventions on the dome of tanks and/or containers in complete safety, by an adjustable working height between 290 and 450cm.

The fall from height is the second cause of fatal accidents after those in traffic. This risk is all the more present during work carried out on the dome of vehicles, especially during interventions on trucks, containers or tanks. Access to tanker domes, when they are parked in a parking lot, is difficult because they are equipped with a ladder and guardrails that are restricted in width.

Principle of operation

The mobile ladder is of very sturdy construction and is easy to move thanks to its chassis

equipped with wheels, two of which are retractable, by means of a manoeuvring tiller (patented system).

This product has been inspected and approved according to the current legislation and is NORISKO and TÜV SÜD certified.
